

## 1] What is SQL?

**Ans:**

SQL (Structure Query Language) is a programming language used for create, store, retrieve, update, delete, and manage data in database. In short, it used to communicate with database.

## 2] What is the difference between Data and Information?

**Ans:**

| <i><b>Data</b></i>                                           | <i><b>Information</b></i>                                             |
|--------------------------------------------------------------|-----------------------------------------------------------------------|
| Data is a collection of raw facts or information.            | Information means the data in contextual format or in meaningful way. |
| It is not useful until we processed on that particular data. | Information is useful for understanding and making decisions.         |
| For ex,<br>Apurva, Sanika, Priyanka                          | For ex,<br>List of students studying at ITVEDANT Institute.           |

## 3] What is Database and DBMS?

**Ans:**

- **Database:** A database is a well-organized collection of related data stored electronically so that it can be accessed and managed easily. Database are used in almost every organization to maintain large amounts of information securely. Instead of keeping records on paper, organizations store data in database so it can be searched, modified, and shared easily.

- **DBMS:** A Database Management System (DBMS) is software that allows users to create, manage, and control database. It acts as a bridge between the user and the database, making it easy to add, edit, delete, and retrieve data while ensuring security and reducing data duplication.

#### **4] What is Relational Database Management System (RDBMS)?**

**Ans:**

A Relational Database Management System (RDBMS) is a type of DBMS that stores data in tables made up of rows and columns. Different tables are connected through relationships using keys, which makes data retrieval faster and more organized. It is suitable for large and complex applications.

#### **5] State at least 5 names of Database Management System software.**

**Ans:**

- a) MySQL
- b) Oracle Database
- c) Microsoft SQL Server
- d) PostgreSQL
- e) SQLite
